The Particularity of the Kindergarten Curriculum and Its Development Paths

TIAN Hong -yan ,SHI Feng -wei

(Research Center of Preschool Education, Tongcheng Normal College, Tongcheng 231400,China)

Abstract: The particularity of kindergarten curriculum is embodied in its service objects, curriculum contents and curriculum implementation ways, which is the basic condition of scientific development of kindergarten curriculum. The basic approach to develop kindergarten curriculum includes three aspects: firstly, the child body care should be paid attention to and exercise activities curriculum is developed in the child care activities;secondly, child mental health should be emphasized, and educational activities courses are developed in health activities; thirdly, on the basis of"double protection", exercise activities and educational activities are integrated.

Key words: kindergarten curriculum; particularity; curriculum development
